# Challenges and Solutions for the Social Implementation of Autonomous Driving

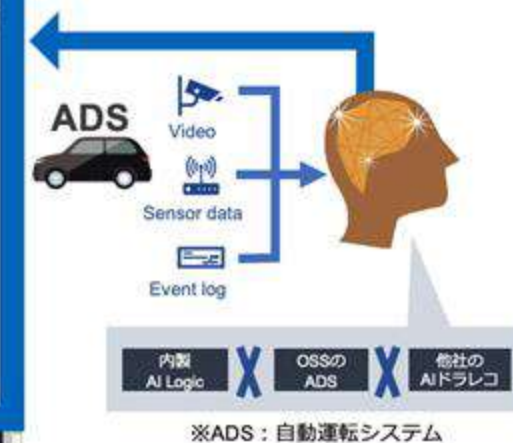

**Mounting Challenges, Especially:**

**Remote monitoring, previously requiring human observation, recognition, and decision-making, is automated with AI.**

**Cost**

**Safety**

**People Do Not Normally Look at This Screen**

# Further Challenges in Autonomous Driving

**Unable to Handle Complex and  
Unpredictable Driving Scenarios**

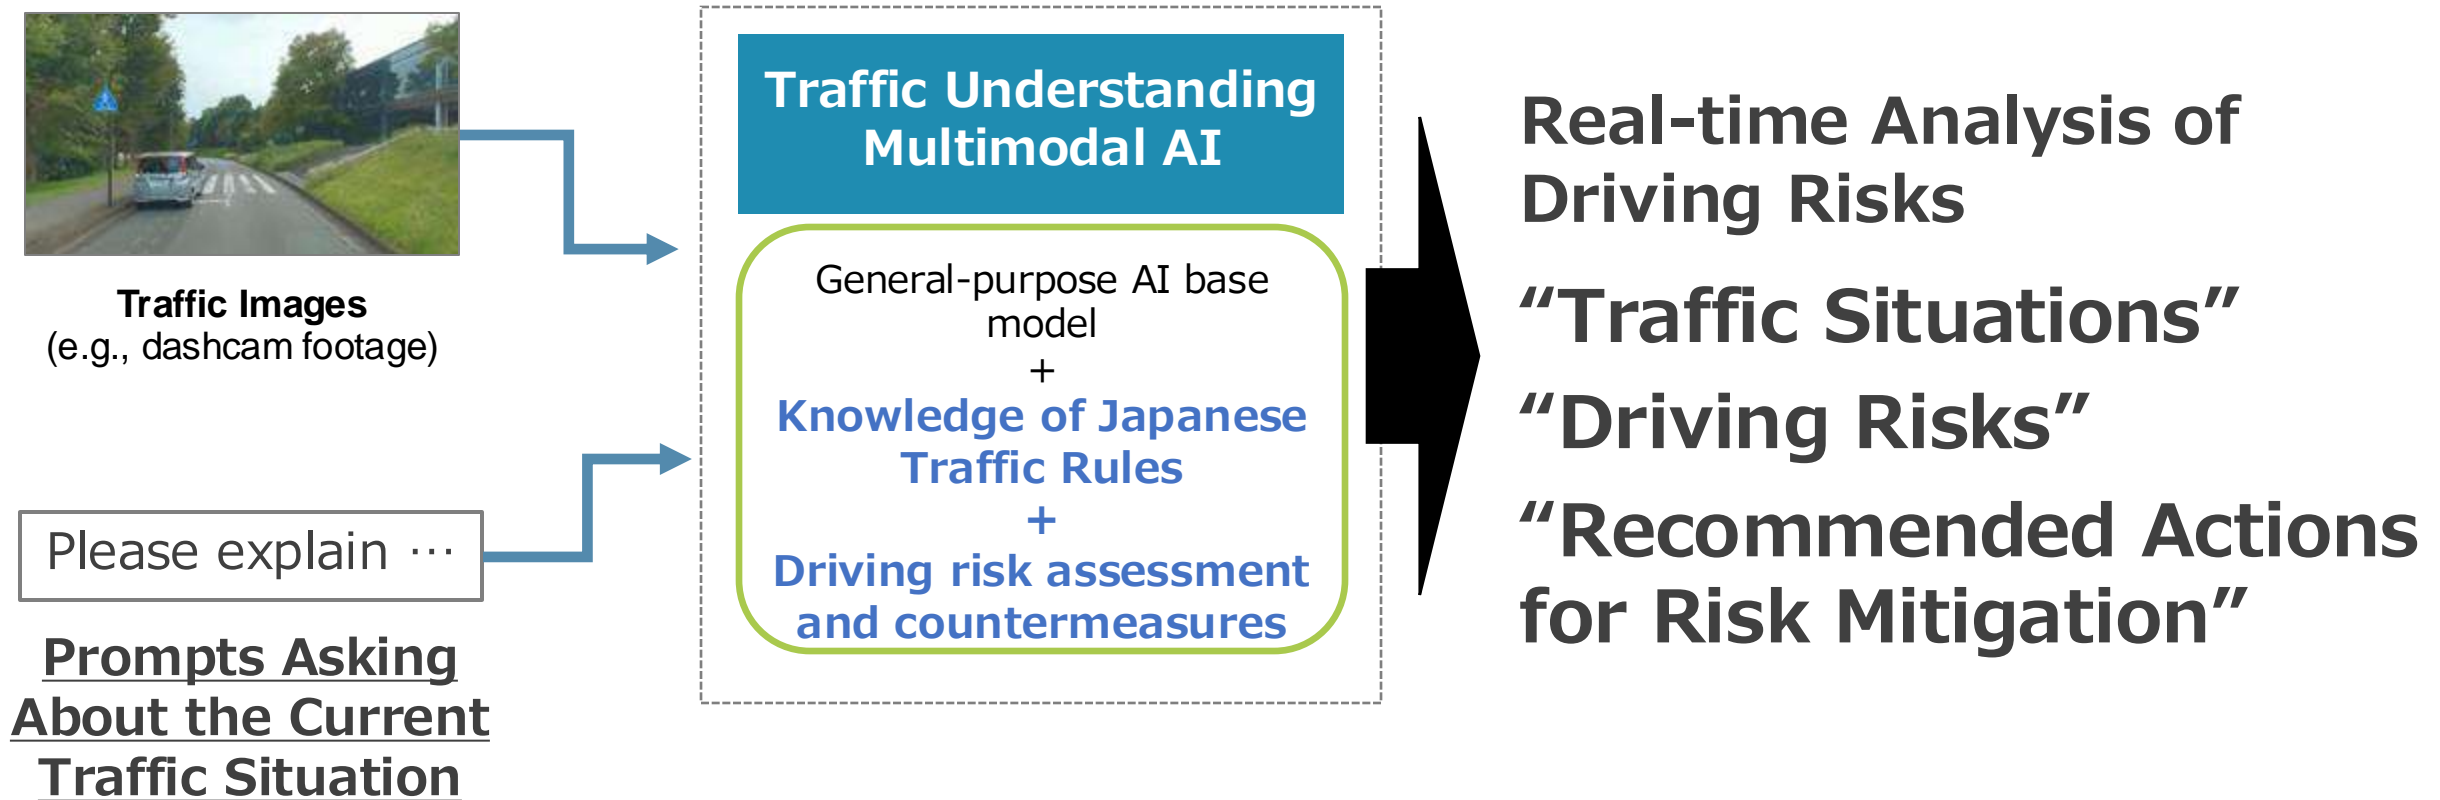

Risk of Severe Accidents and Collisions

Real-time Understanding of  
Driving Situations Providing  
Remote Support

Development of  
Multimodal AI for  
Traffic Understanding

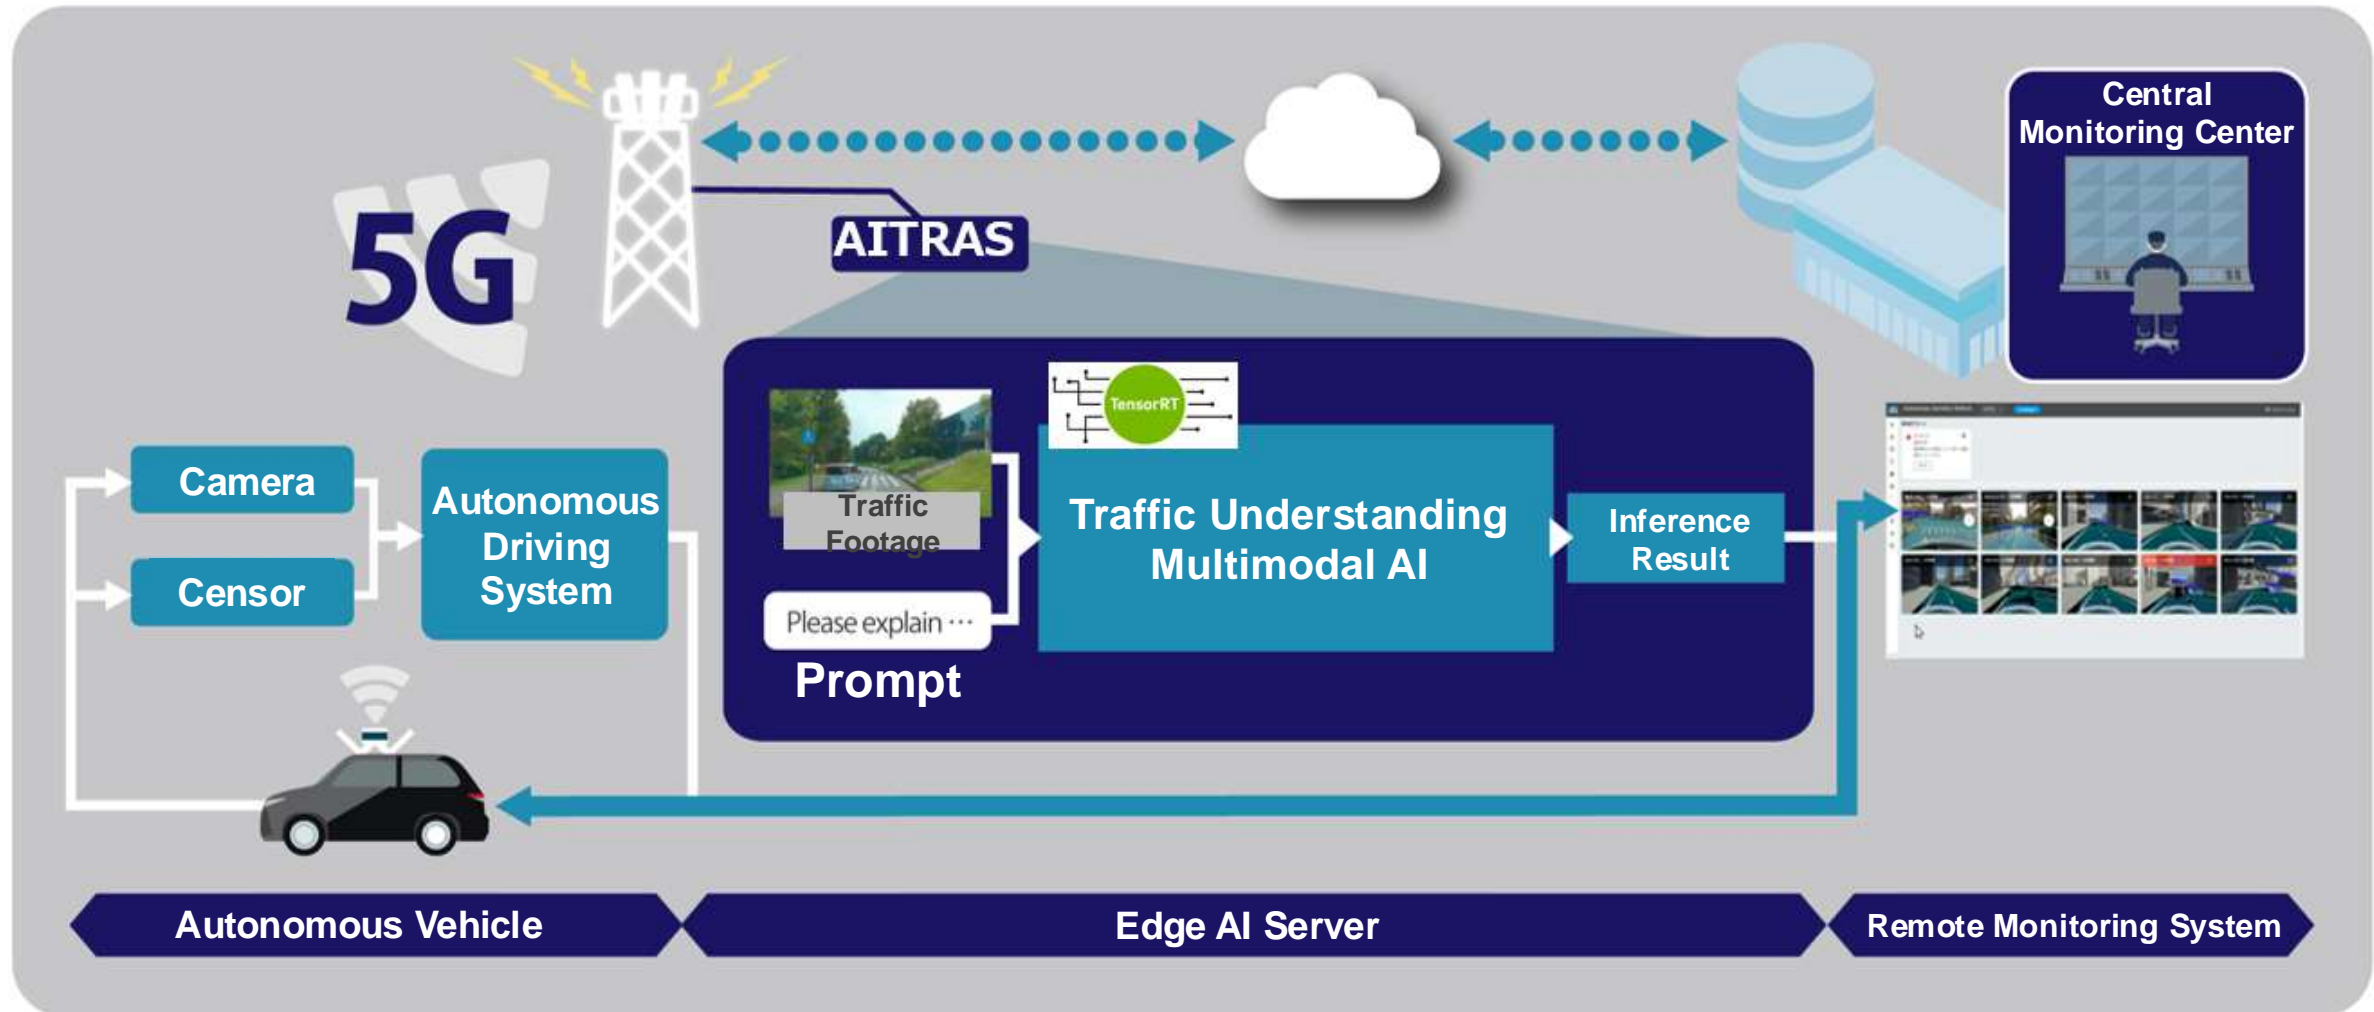

# Features of Multimodal AI for Traffic Understanding

**Multimodal AI capable of handling complex and unpredictable driving scenarios**

# Remote Support Solution for Autonomous Driving

## Delivered with Ultra-Low Latency and High Security

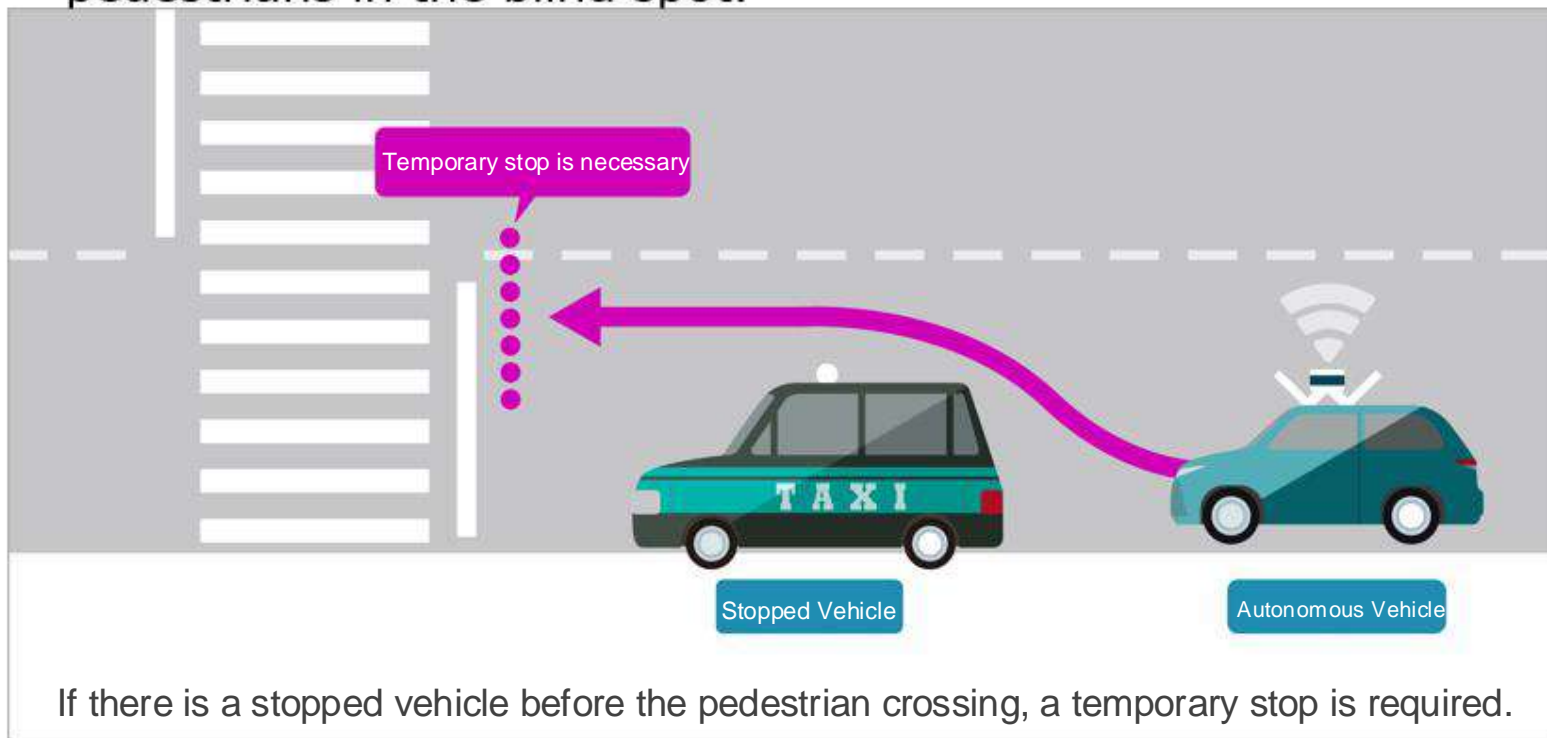

# Demo Overview – Driving Scenario

**“Driving in a situation where a vehicle is stopped in front of a pedestrian crossing”**

## Risk Factors :

When an autonomous vehicle approaches a pedestrian crossing, there is a possibility of colliding with pedestrians in the blind spot.

# Demo Overview - Driving Scenario

Monitor Screen

### AI Inference Result

The car is slowing down at the straight road.  
Because the other car is stopping in the cross walk ahead.

**The current level of risk is high.** Because the pedestrian who may come out ahead is causing the risk of collision. Therefore, it is recommended to stop.

STATUS

## アラート 全て表示

- 11:05:15  
**マルチモーダル出力**  
The car is going straight at the straight road. Because there is no traffic in the roadway ahead. The current level of risk is low. Therefore, it is recommended to drive normally.
- 11:05:13  
**マルチモーダル出力**  
The car is going straight on the curve. Because there is no traffic in the roadway ahead. The current level of risk is low. Therefore, it is recommended to drive normally.
- 11:05:07  
**マルチモーダル出力**  
The car is going straight at the straight road. Because there is no traffic in the cross walk ahead. The current level of risk is low. Therefore, it is recommended to drive normally.
