Hints

Polarity Reversing Adapter For BB Phone

You won't need Polarity Reversing Adapter in normal installation. But when you use BB Phone Service, you may need to use this adapter in following cases. So please keep it somewhere you can find it later.

You need Polarity Reversing Adapter when ...

- Number Display doesn't work.
- The line is cut off when you answer it on first ring.
- You cannot hear the first calling tone for BB Phone connection.
- Your answering machine doesn't work (in auto-receive without ring).
- Your fax machine doesn't work (in auto-receive without ring).

Please prepare the following items:

■ Customers for BB Phone Service

- telephone (or fax machine)

■ Customers for Yahoo! BB ADSL Service

- PC (Personal Computer) - Recommended: Windows 98/98SE/Me/2000/XP, MacOS (recommended OpenTransport 2.7 or later).
- LAN card for 100Base-TX (※You need PC Card (PCMCIA) LAN card or USB type LAN interface for your note PC if it doesn't have 100Base-TX interface.)

- ※ We recommend PCs which came out in 3 years or newer for our broad band contents.
- ※ We won't support Windows 95 because Microsoft will no longer support it and it might be difficult to install new network device on it.
- ※ We recommend OpenTransport 2.7 or later for Macintosh. If you don't have it, please update OS (to MacOS 9.1 or later, MacOS X or later) or OpenTransport. We can not guarantee that we provide good connection with older versions.
- ※ You can use this package with other OSs like PC Unix (Linux etc.) and Windows NT if it can handle TCP/IP and get IP address with DHCP. But you cannot get any support for these OSs.
- ※ You need Japanese-localized OS (Operating System).

Yahoo! BB ADSL Service Connection of equipments

① Turn off all equipments

Turn off all equipments you connect (PC/Trio Modem/telephone/fax machine).

② Disconnect your telephone (or fax machine)

Disconnect the modular cable between your telephone (or fax machine) and modular jack on the wall.

③ Connect Trio Modem to modular jack

Connect modular jack port on Trio Modem 26M and modular jack on the wall with a yellow modular cable in this package.

④ Connect Trio Modem and your telephone (or fax machine)

Connect the modular cable from your telephone (or fax machine) to telephone port on Trio Modem 26M with a green modular cable in this package.

⑤ Turn on your telephone (or fax machine)

Turn on the power of your telephone (or fax machine).

⑥ Connect Trio Modem to your PC

Connect LAN card and PC port on Trio Modem 26M with a blue LAN Cable in this package.

⑦ Turn on Trio Modem

Connect the Power Supply Adapter to power port on Trio Modem 26M, then connect it to the outlet on the wall.

⑧ Turn on your PC

Wait until the Link indicator turns on, then turn on your PC.

※ Please install modem on flat place with good air flow.

Caution:

- This service is best effort type service. The downlink speed is the maximum value in technically theory. The actual communication speed may vary because of your home environment, the distance from NTT's building. There is no guarantee for the communication speed. And it may take the time before you can use it or you cannot use this service in a worst case.
 - "Yahoo! BB 26M" Service is actualized acceleration by adopting Double Spectrum System. In adoption of the technology, we execute the interference measure of ham radio, which is reported by Telecommunications Council under Ministry of Public Management, Home Affairs, Posts and Telecommunications.
 - Yahoo! BB ADSL Service and BB Phone Service cannot be used or cannot establish stable communication with following system: Home Telephone, Business Phone, indoor wiring, telephone connected to door phone, additional dial-in number, signal monitoring service, telemetric service for electricity.
If you are using these services on your telephone line, you might need additional line for ADSL service, like Analog Lite Plan.
In addition, when you use telemetric service for electricity, gas and water meters (no-ringing service) or defense security, you may need correspondence construction in use of Yahoo! BB ADSL Service or BB Phone Service. Please ask each company for details.
 - If you are using off-talk communication service, some noise may interfere with the broadcasts via this service.
 - If the distance from NTT building is too far (4km or more), we recommend Yahoo! BB Reach DSL Service.
- ※ To change your subscription to 12Mbps or 8Mbps, you need to pay the fee for jumper setting in NTT building and the fee for subscription change.

Front Panel and Indicators on Yahoo! BB Trio Modem 26M

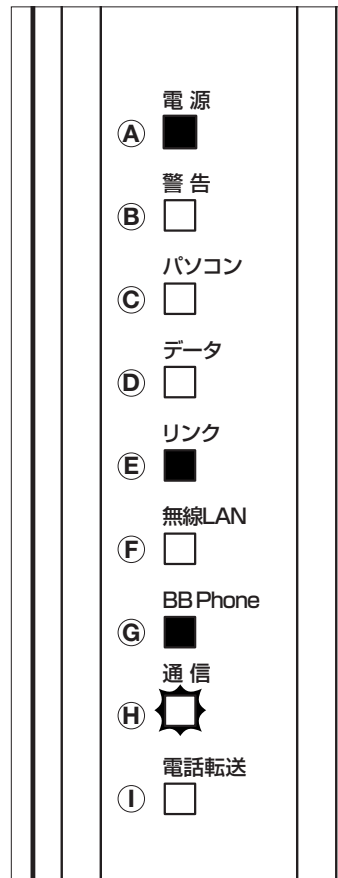

Check the status with LED indicators on the modem

■ ...Light □ ...Extinction ☆ ...Blink

If all devices are connected correctly, now please check the LED indicators on the modem.

When you turn on Trio Modem 26M, all LEDs turn on in 30 seconds. After 1 or 2 minutes, "電源", "リンク", "BB Phone" remain on to indicate the connection is good as following figure.

- Ⓐ 電源 (Power) This LED will light when Yahoo! BB Trio Modem 26M is supplied power. When it does not light, please check connection of the Power Supply Adapter.
- Ⓑ 警告 (Warning) This LED will light when an error occurs. Please turn off the modem once then turn on again, if this indicator keeps lighting.
- Ⓒ パソコン (PC) This LED will light when the modem has good connection with your PC. While power of the PC is not on, it won't light.
- Ⓓ データ (Data) This LED will blink while any communication with your PC.
- Ⓔ リンク (Link) This LED indicates good connection via ADSL. It won't light if the modem is not connected to telephone line or cannot get signal from NTT.
- Ⓕ 無線LAN (Wireless LAN) . . . This LED is used with Wireless LAN Service. It lights when a wireless LAN card for Trio Modem is installed in Trio Modem 26M and the wireless LAN connection is ready.
- Ⓖ BB Phone This LED will light when BB Phone service is available. If it does not light, you cannot use BB Phone Service.
- Ⓗ 通信 (Communication) . . . This LED will light when you are dialing and connecting via BB Phone. It also blinks when you get an inbound calling and the telephone is ringing or when PC is communicating via Internet (It may blink at random times when you use NTT's telephone service).
- Ⓘ 電話転送, 電話転送開始 (Forwarding) . . . This LED indicator and button are not used in current service.
